COPPER AND GOLD

CASINO

WESTERN COPPER AND GOLD CORPORATION (TSX:WRN | NYSE-AMERICAN:WRN) is advancing the world-class, critical minerals Casino mining project through environmental permitting, development and ultimately project construction in the Yukon. With a strategic investment from two of the largest mining companies (Rio Tinto and Mitsubishi Materials), and an organizational commitment to sustainable mining practices, the Company has the potential to become a landmark, multi-generational business in Canada.

POSITION

Geologist

POSITION SUMMARY

The Company is looking for a Geologist to provide geology support for the Casino copper and gold project in the Yukon Territory.

The Geologist will report to the VP, Technical.

LOCATION

The Geologist will ideally be based ideally in Whitehorse, however other cities will be considered for the right candidate. Regular site visits will be required for coordinating directly with our Whitehorse office and may also be required for site-based management work.

KEY RESPONSIBILITIES

- Ensure all current quartz, placer and limestone claims are actively managed and in good standing; including processes to monitor and acquire new claims within Casino PDA.
- Technical oversight of site drilling activities, including reviewing sample logging protocols, QA/QC and quality.
- Manage geology laboratory contractors.
- Maintain and update geology databases.
- Collaborate with mine planners, geotechnical engineers, metallurgists on project deliverables as required. Communicate across all levels including executive, senior management and consultants.
- Plan, prepare, maintain geology models
- Further enhance and actively manage, update and ensure all block models are done within alignment of ESA approvals and CIM NI 43-101 requirements.
- Work collaboratively with the metallurgists and mining engineers to develop geo-met, geochemistry programs, and geotechnical programs.
- Other duties as assigned.

EDUCATION, EXPERIENCE & SKILLS

- 10-15 years of experience.
- Deep understanding of porphyry and VMS deposits; structural geology, mineralogy, lithology, alternations.
- Experience in geo-met work; particularly at the project development phase.
- Deep experience in porphyry and VMS modelling.
- QA/QC knowledge and understanding including database integrity in alignment with CIM NI 43-101; QA/QC of lab testing, core handling and storage, core prep, resource and reserve estimation.
- Bachelor's degree in Geology or Geological Engineering or a relevant discipline.
- P.Geol. is an asset.
